Continuation of 5. does NOT place the application in condition for allowance because: Applicant argues that the outer surface of the pipe is exposed to a vacuum atmosphere. The apparatus of Fukasawa et al is in a clean room and some clean rooms operate in a vacuum atmosphere such as U.S. Pat 4,838,150 which creates a vacuum pressure using an exhaust means, Merriam-Webster defines vacuum a a space partially exhausted by artificial means. Applicant argues that the references provide no suggestion of the problem in degassing which the structure claimed is designed to solve. While the structure may be designed to solve this problem, the claims lack language addressing specifically a degassing problem. Applicant argues that the references are silent to the problem of a disturbance to the stage by the pipe action, again the claims lack such language.
